

Keyboardin' Ain't Easy???

How to not build a  
keyboard!!!

Liz Frost :: stillinbeta :: she/her

By day: infrastructure “engineer”

I set out to build my perfect keyboard.

I set out to build my perfect keyboard.

I failed.

Why?

Hubris.

# DSA Dark Magical Girl

# Feature List

- ✓ Split Keyboard
- ✓ USB C
- ✓ Cool Screens
- ✗ Gamer RGBLEDs
- ✗ Connector on Right

# Feature List

✓ Split Keyboard

✓ USB C

✓ Cool Screens

✗ Gamer RGBLEDs

✗ Connector on Right

✓ Open Source

Hubris.

*Hubris.*

Sorry to bother you, but there is an issue that we want to confirm with you before proceeding.

As shown below, the hole to hole clearance is too narrow.

Shall we reduce the holes diameter to make finished holes diameter as 0.4mm holes?

### Copper

Minimum clearance:

mm

Minimum track width:

mm

Minimum annular width:

mm

Minimum via diameter:

mm

Copper to hole clearance:

mm

Copper to edge clearance:

mm

### Holes

Minimum through hole:

mm

Hole to hole clearance:

mm

# Hubris

What did you think would happen?

# Things that might be wrong.

- Board Design
- Board Manufacture
- Bad programmer (component)
- Bad programmer (me)
- Bad chip
- Bad LED
- Misread Data Sheet
- Solder Bridge
- Over/Undervoltage
- QMK
- Angered Zeus
- ????

The background is a detailed, stylized representation of a printed circuit board (PCB). It features a dense network of red and blue lines representing traces, which are interconnected by small yellow circular solder points. Several dark blue, rectangular components, likely representing integrated circuits or microchips, are scattered across the board. The overall aesthetic is technical and digital, with a high-contrast color scheme of red, blue, and black.

I gave up

(started over)

## *Feature list*

- Pre-Soldered
- Built-in programmer
- STM32
  - (available)

# Unfeatures

- USB Port

Gamer Rgb1eds?

# Depth-first Engineering

- I want to put these keycaps somewhere
  - I should get a mechanical keyboard
    - I should *build* a mechanical keyboard
      - How hard can PCB design really be
        - I'm sure I can learn to surface-mount solder
          - I2C can't be that complicated a protocol
            - C++ sucks let's do Rust
              - I've never written a driver but I bet I can do this
                - The library has a copy of a book on the USB protocol
                - (Slides won't let me indent anymore)

**PCB DESIGN**

**ME**

**GETTING INTO KEYBOARDS**

Prototype, Prototype, Prototype!

(don't do waterfall)

# Thank you!
